INTRO
I promise not to be boring

My name is Jarek Karczewski and I'm a 30-year-old from Poznań who creates front-end for websites and internet apps. Like many other people in this industry, I also possess other professional experience. However, since the beginning of my professional career I have been associated with the creative industry, and front-end development is for me a natural step on the path of my professional career.

MY EXPERIENCE
Companies I have worked with

2015 – Present
STUDIO 6/8
Senior Graphic Designer

Graphic design of digital and printed materials. DTP composition. Designing graphic designs that take into consideration responsiveness for websites. Designing UI and UI elements for web apps. Designing and implementing advertising materials taking advantage of modern Internet technologies (e.g. HTML5 banners). Implementing advanced tasks from the borderline of DTP and IT (e.g. automation of graphic work using a variety of non-standard data sources). Creating corporate identity systems for companies. Designing structures and advertising stands. Additionally: creating realistic visualizations using 3D graphics software.

2015 – 2016
SOUL & MIND
Junior DTP Specialist

Graphic design and DTP composition of packagings and other printing materials. Creating realistic packaging visualizations.

2014 – 2015
PERITUS
Junior Graphic Designer

Graphic design. Creating corporate identity systems. Graphic designs for websites. Implementation of simple website designs using own graphic designs.

MY EXPERTISE
What I am all about

FRONT-END DEVELOPMENT
I put HTML and CSS on an equal level with my native language. I create front-end friendly for users, browsers, and mobile devices. I love working efficiently with the tools that make it easier for me (e.g. SASS and BEM).

UI DESIGN
I've designed hundreds of icons, and other UI elements, as well as several complete interfaces. The experience I possess definitely makes it easier for me to work with web apps. I like it when everything is nice and properly arranged. It calms me down. Just kidding.

MODERN JS
I take advantage of modern constructions of this language (primarily ES6) and also establish good habits related to code optimization or object-oriented programming. I avoid creating junk code at all costs.
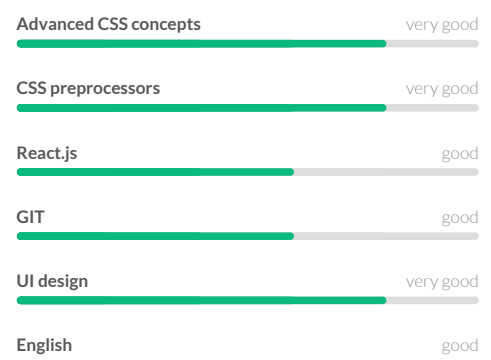

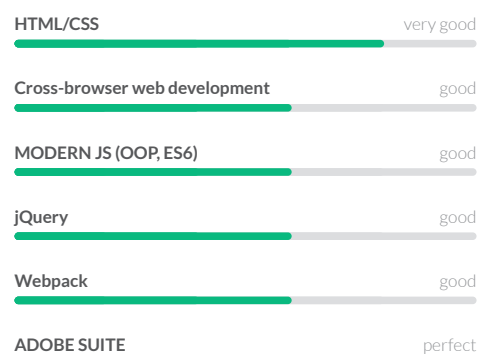

REACT.JS
React is one of the reasons why I decided to become a front-end programmer. I constantly expand the portfolio of applications with advanced elements of this technology, e.g. the FLUX pattern.
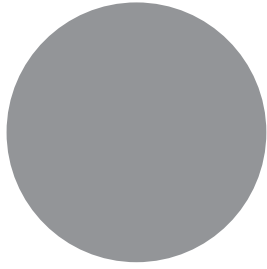

NODE.JS
As a front-end developer I want to possess at least basic back-end knowledge to be able to work on increasingly advanced and interesting projects.

GIT
My experience allows me to work in teams using GIT. I use it even when I work alone because it is a great tool increasing work efficiency.

MY SKILLS
Technologies, software and everything else

Skill	Level
HTML/CSS	very good
Advanced CSS concepts	very good
Cross-browser web development	good
CSS preprocessors	very good
MODERN JS (OOP, ES6)	good
React.js	good
jQuery	good
GIT	good
Webpack	good
UI design	very good
ADOBE SUITE	perfect
English	good
